Feature

After extremely complex and multi-step processes, Navyfel CN2.0 drysuit removes the shortcomings of neoprene material such as large buoyancy changes and involuntary movement, and perfectly retains the advantages of neoprene material such as warmth, wear resistance, and puncture resistance. If you are diving locally, Compared with the trilaminate, the weight is slightly increased, but it can bring you greatly improved durability. CN2.0 is definitely worth having

Suit range :

Technical diving, wreck diving, cave diving and other adventure diving and fishing, ship repair, rescue and other professional commercial diving.
